Hiring Manager
Dynatron

Re: Sr. Director of Data

I am writing to express my interest in the Sr. Director of Data role at Dynatron. The combination of ownership over data strategy, hands-on platform credibility, and close partnership with Product and Engineering is exactly the kind of role I have been building toward - and the description maps closely to how I have operated across my career.

At Gilead Sciences, I led a team of data scientists and analysts while serving as a strategic advisor to executive leadership, owning the enterprise data and analytics strategy, building a centralized data lake from multi-vendor sources, and establishing data governance frameworks that improved data quality and operational consistency at scale. At Redica Systems, I owned the data and AI roadmap end-to-end - translating business and product priorities into a sequenced set of initiatives, building production ML models in Snowflake, and deploying a company-wide LLM classifier that now runs across the entire client platform. On the platform side, I have hands-on production experience with both Snowflake and Databricks, and I understand modern data architecture well enough to challenge technical decisions constructively without needing to be in the code day-to-day.

What appeals to me specifically about Dynatron is the combination of strong product momentum and a clear mandate for the data organization to drive measurable business outcomes - not just build infrastructure. I have found that the most impactful data work happens when there is tight alignment between data strategy and product priorities, and the structure you describe - partnering closely with architects and engineering while owning execution and outcomes - is one that plays to my strengths. I am also drawn to the SaaS context, where data assets and analytics capabilities can directly differentiate the product in the market.

I would welcome the opportunity to learn more about Dynatron's data organization and discuss how I could contribute to the next phase of growth.

Thank you for your consideration. I look forward to the possibility of joining the Dynatron team.

Sincerely,

Matt Oremland, PhD
