Hiring Manager
Alignment Health

Re: Director of Data Science

I am writing to express my interest in the Director of Data Science role at Alignment Health. With over a decade of experience building and deploying production machine learning systems in healthcare and pharmaceutical environments, I am excited by the opportunity to help Alignment embed AI capabilities into care delivery models that directly improve outcomes for seniors.

My background spans the full ML lifecycle - from designing LLM-based classifiers on unstructured text and RAG pipelines for document retrieval, to deploying predictive risk-scoring models in Snowflake and Databricks that run across enterprise platforms. At Gilead Sciences, I led a team of data scientists and analysts responsible for healthcare professional and organization analytics, building a centralized data lake and establishing enterprise data governance frameworks that supported the Medical Affairs organization's strategic decision-making. At Redica Systems, I built a production LLM classifier over FDA regulatory data, owning prompt engineering, validation, and cross-functional deployment in collaboration with data engineering.

I am drawn to Alignment Health because of the clarity of your mission. Applying predictive analytics to improve care for seniors and the chronically ill is exactly the kind of high-impact problem I want to work on. I bring both the technical depth - in statistical modeling, responsible AI validation, and scalable ML architecture - and the leadership experience to grow a data science team while partnering with clinical, product, and executive stakeholders to define and advance your AI roadmap.

I would welcome the opportunity to discuss how my experience aligns with your goals at Alignment Health.

Thank you for your consideration. I look forward to the possibility of contributing to your mission of putting seniors first through data-driven, responsible AI.

Sincerely,

Matt Oremland, PhD
